**YEAR:** Final Year

## 1. Introduction:

The CRM Application for TheChaiShop&Co is a Salesforce-based system designed to manage customer, employer, and enterprise information efficiently. It automates order and billing calculations, customer communication, and provides reports and dashboards for better sales management.

## 2. Problem Statement:

TheChaiShop&Co faces difficulties in managing customer information, employer details, orders, and billing processes manually. Sales representatives often make errors while calculating order quantities and total bills, while managers face delays in accessing accurate sales reports. Customers also do not receive timely personalized notifications such as birthday offers.

## 3. Solution:

The proposed solution is to develop a Salesforce-based CRM application for TheChaiShop&Co that centralizes customer, employer, and enterprise information. The system uses Salesforce objects, record types, page layouts, validation rules, formula fields, flows, reports, and dashboards to streamline business operations.

The solution provides:

- Centralized customer and business data management
- Automated order quantity and total bill calculations
- Validation rules to reduce incorrect data entry
- Separate record types for online and walk-in orders
- Automated birthday email notifications and special offers
- Reports and dashboards for sales analysis and decision-making
- Secure and scalable cloud-based data management.

# 4. Objectives:

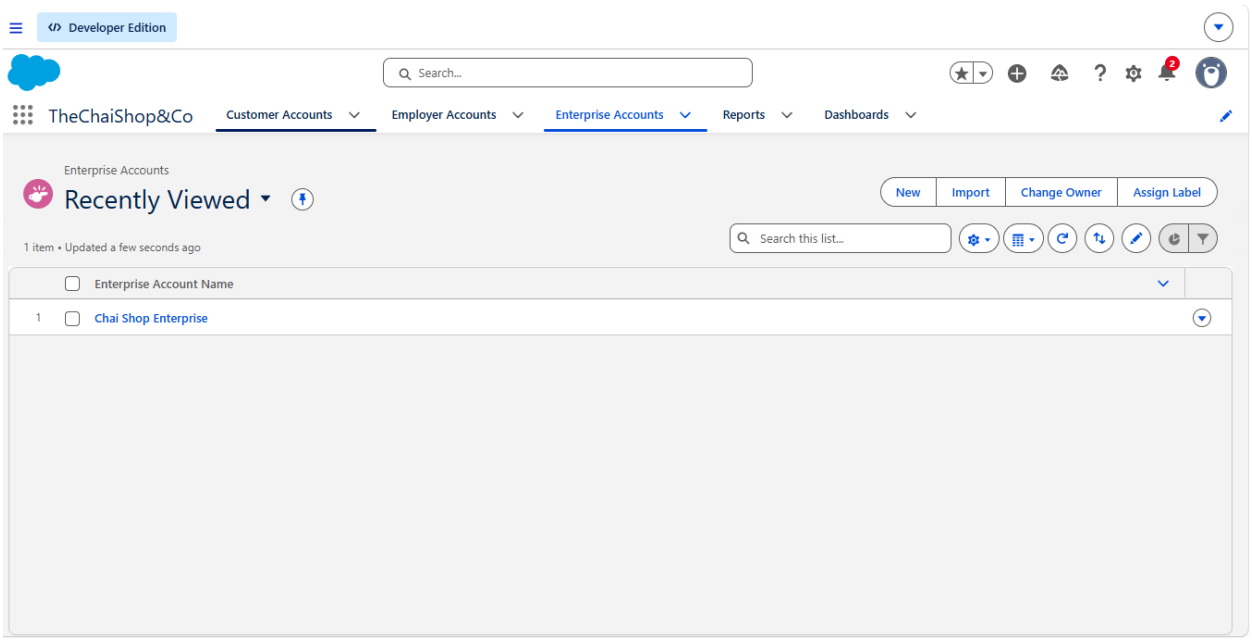

1. To streamline customer relationship management by maintaining customer, employer, and enterprise information in a centralized Salesforce CRM.
2. To automate sales and billing processes by calculating order quantities and total bill amounts accurately.
3. To improve data accuracy using validation rules, standardized picklists, and structured record management.
4. To enable data-driven decision-making through sales reports and interactive dashboards.
5. To enhance customer engagement by automating personalized birthday email notifications and special offers.

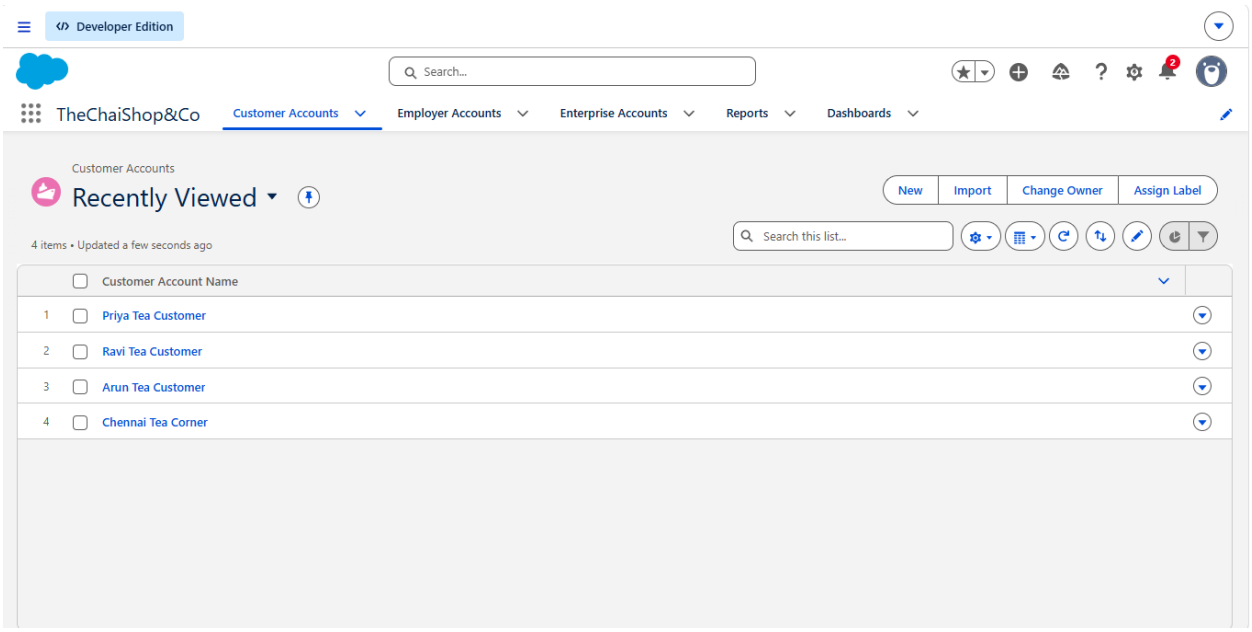

# 5.PHASES OF DEVELOPMENT:

The development of the **CRM Application for TheChaiShop&Co** is divided into the following phases:

**3.1 Ideation Phase:**

- Identify the problems faced by sales representatives, managers, and customers.
- Prepare the problem statement.
- Create an empathy map.
- Brainstorm possible solutions.
- Select a Salesforce-based CRM as the proposed solution. Pasted text

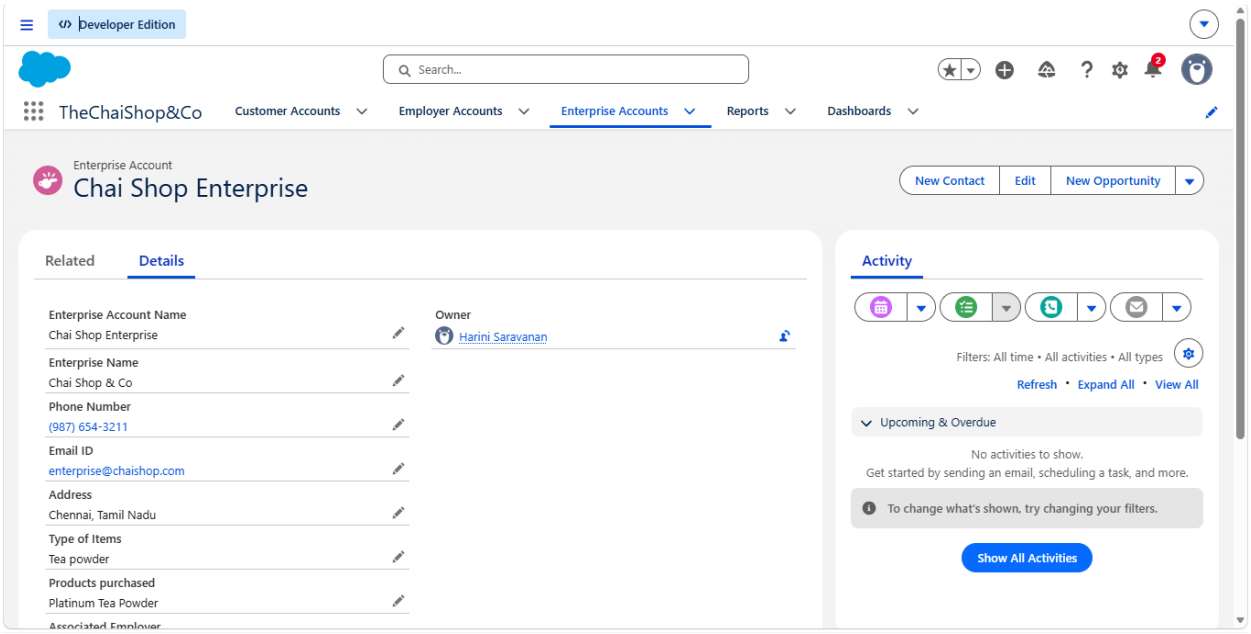

## 3.2 Requirement Analysis Phase:

- Identify functional and non-functional requirements.
- Prepare the customer journey map.
- Define system requirements such as login, object creation, billing automation, reports, and email automation.

- Define security, reliability, performance, availability, and scalability requirements.

### 3.3 Project Design Phase:

- Design the proposed CRM solution.
- Define customer, employer, and enterprise data management.
- Design automated billing, validation rules, record types, email notifications, reports, and dashboards.
- Define the system architecture with presentation, application, data, and analytics layers.

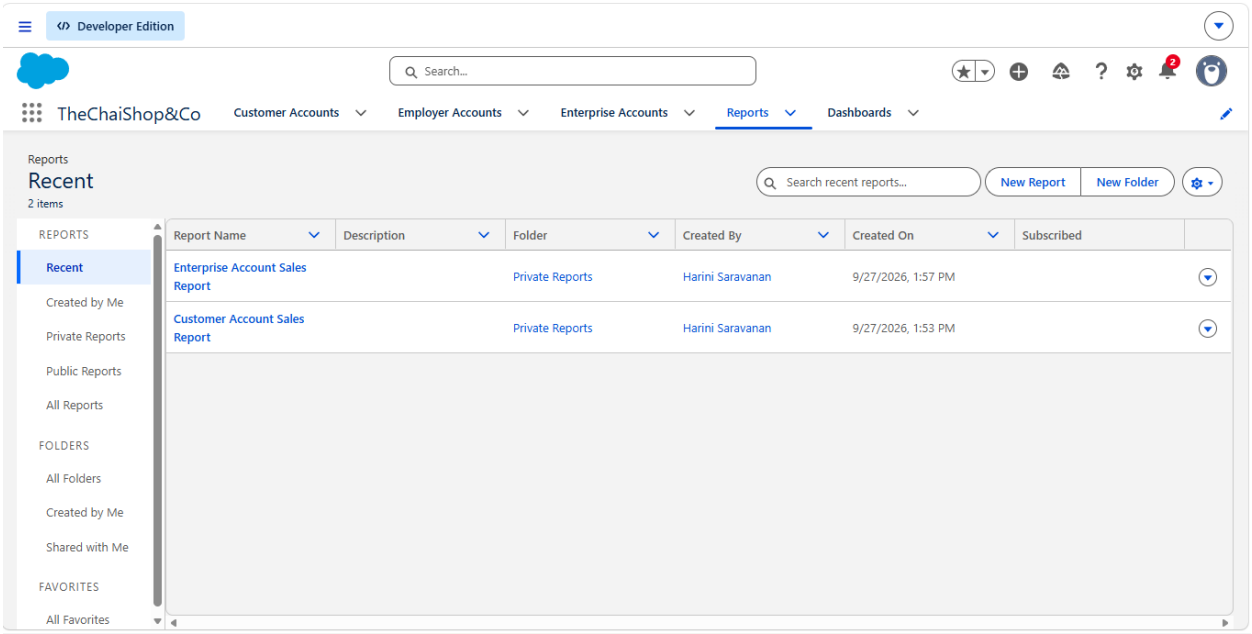

### 3.4 Project Planning & Scheduling Phase:

- Create the project backlog and sprint schedule.
- Divide development into multiple sprints.
- Assign tasks and story points.
- Plan activities such as object creation, automation, reports, and dashboards.

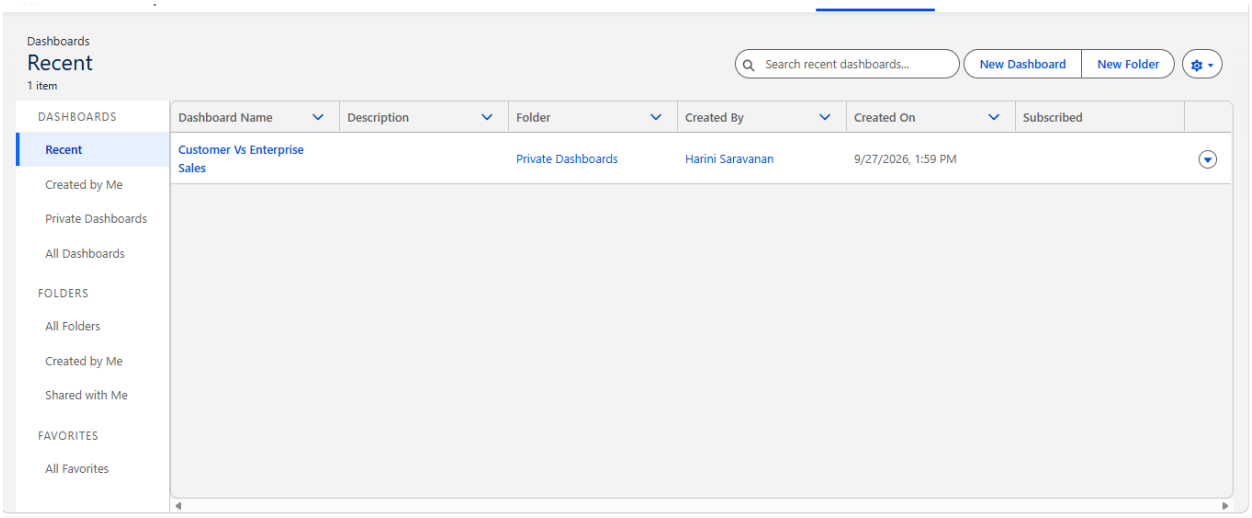

### 3.5 Project Development Phase:

- Create the Salesforce Developer Account.
- Create custom objects and tabs.
- Develop the Lightning application.
- Configure global picklists, fields, relationships, page layouts, and record types.
- Implement validation rules, email templates, flows, reports, and dashboards.

## 3.6 Testing Phase:

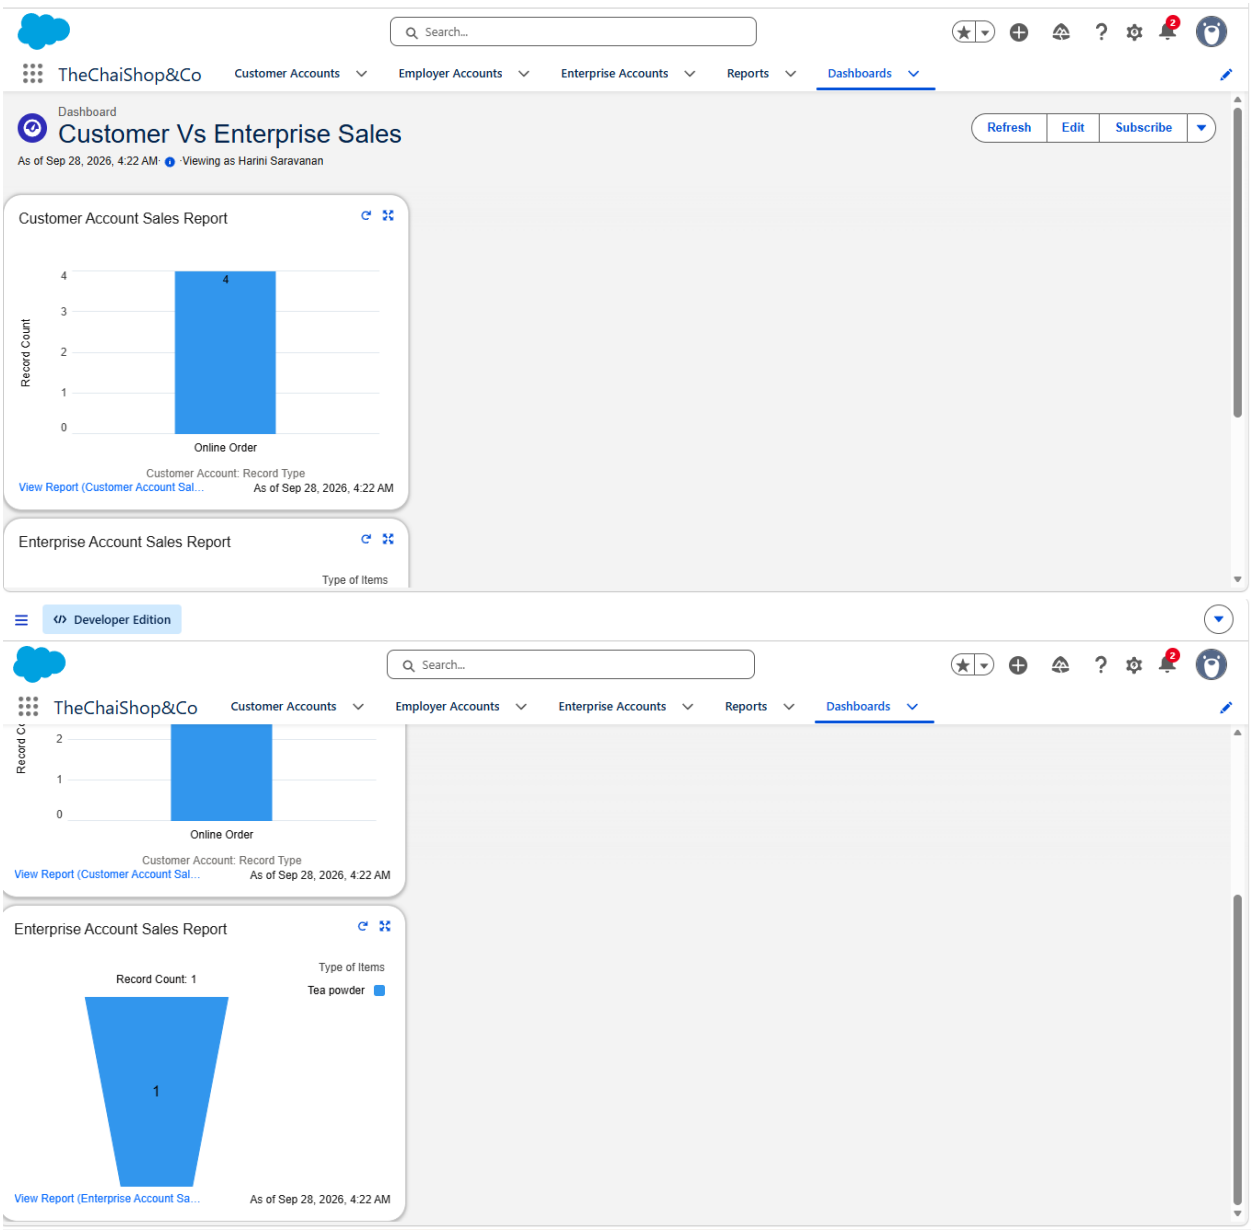

- Test record creation and data entry.
- Test validation rules.
- Verify record types and page layouts.
- Test formula fields for order quantity and billing.
- Verify birthday email flows.
- Test reports and dashboards.

### 3.7 Deployment & Conclusion Phase:

- Complete the Salesforce CRM configuration.
- Verify that all major functionalities work correctly.

- Analyze the benefits and limitations of the system.
- Identify future enhancements such as AI-based sales prediction, inventory management, WhatsApp/SMS alerts, and multi-branch support.

## Advantages and Disadvantages:

1. **ADVANTAGES: Centralized Data Management** – Customer, employer, and enterprise information can be managed in one system.

2. **Reduced Manual Work** – Automation reduces repetitive data entry and business processes.
3. **Automated Calculations** – Order quantities and total bills are calculated automatically.
4. **Improved Customer Engagement** – Automated birthday emails and special offers improve customer communication.
5. **Real-Time Analytics** – Reports and dashboards help managers analyze sales and customer data.
6. **Improved Data Accuracy** – Validation rules help prevent incorrect data entry.

**DISADVANTAGES:**

1. **Salesforce License Required** – The application depends on Salesforce licensing.
2. **Internet Dependency** – The cloud-based system requires an internet connection.
3. **Limited Offline Access** – Some CRM functions may not be available when working offline.

## Conclusion:

The CRM Application for TheChaiShop&Co successfully improves business operations by centralizing customer, employer, and enterprise data. The system automates billing calculations, reduces manual errors, generates reports and dashboards for better analysis, and sends automated birthday notifications to improve customer engagement. Overall, the Salesforce-based CRM provides an efficient and organized solution for managing customer relationships and business processes.
